

March 2026 Commentary

*As of 04/07/26*

The Core Alternative ETF (NYSE: CCOR) returned -3.96% (NAV) / -4.07% (Market Price) in March. Although the fund had negative performance, it finished ahead of the overall equity market. Equities were broadly down with ten of the eleven sectors delivering negative returns. The fund had strong stock selection within Energy which benefited from a surge in oil prices. Weaker stock selection in Consumer Staples detracted from performance due to expectations of rising input costs. The option strategy was a positive contributor to overall performance which helped cushion the portfolio during times of volatility. This was primarily driven by selling call options into the market decline.

March saw significant volatility as markets grappled with the escalation of the U.S.-Iran conflict. Concerns over oil supply chokepoints in the Strait of Hormuz sent energy prices soaring and equities tumbling. The Federal Reserve opted to hold interest rates steady, indicating caution around the inflationary risks of higher energy prices and global supply chain instability. As a result, Energy was the only sector to finish the month with positive performance. As we shift into Q1 2026 earnings season, investors will be watching closely to see how much earnings are impacted. There is a growing concern that the optimistic forecasts of the past few months will be undermined by the fallout from recent international conflicts and disruptions.
